id_I	style	id_q	short_description	value	range_low	range_high	unit	range_text
1	fishing guide	11	minor_damage_cost	NA	10000	20000	sek_unit	10 20k kr
1	fishing guide	12	major_damage_cost	NA	20000	6e+06	sek_unit	20 600k kr
1	fishing guide	36	fdays	100	NA	NA	NA	100
1	fishing guide	37	income	NA	6000	8000	sek_day	6000 8000 SEK/day and boat, generally the same for everyone
1	fishing guide	38	season_maint	NA	50000	10000	sek_season	oh, you don't want to know! what I do is so uneconomical; if the engine breaks then several 100,000 SEK go up in smoke, electric motor 50,000 SEK, sonar 50,000 SEK; is it rather 100,000 200,000 than 10,000 50,000 SEK? yes. Large part is expenses for material, applies also to the cars; 5 days a week fishing, 1 service day per week, 1 family day
1	fishing guide	39	fuel_trip	NA	1000	1000	sek_day	maybe 1000 SEK/fishing day; this is the biggest expense besides food for a day
1	fishing guide	40	extra_fuel	NA	500	500	sek_day	1500 SEK for such a longer travel day
1	fishing guide	41	extra_crew	NA	2000	3000	sek_day	I always guide myself; there are some who sometimes take in an extra person; quite expensive, since it is salary and employer's contributions etc. (guess they get 1500 SEK, so in total it becomes 3000 SEK).
1	fishing guide	42	extra_cleaning_cost	NA	NA	NA	sek_day	a whole workday for service, so it costs what I earn on a fishing day; no, not for algal bloom, but in gale or storm there are many lines that must be fixed; twice I have broken the boat due to icing, the trim motor and the steering, 15,000 SEK per time.
1	fishing guide	43	extra_other	NA	NA	NA	sek_day	the biggest cost is the loss of income. Cancelled fishing days. A tourist usually does not rebook, especially if it is short notice change then I don't have time to get in something else. Guides for corporate events are at 30,000 SEK, or 60,000 SEK when we are out with 6 boats; if you miss that then the whole income disappears; loss of income also arises because people do not book when there is extreme weather.

id_I	style	id_q	short_description	value	range_low	range_high	unit	text
2	coastal	11	minor_damage_cost	NA	10000	50000	sek_unit	Tens of thousands of SEK, nets and such
2	coastal	12	major_damage_cost	NA	1e+05	5e+05	sek_unit	Several hundred thousand SEK
2	coastal	36	fdays	NA	50	100	days	Hard to say. If we have 6 months without ice, we actively fish 1 third of the days. But we keep the gear in the water all ice free days.
2	coastal	37	income	NA	1e+06	15000000	sek_season	Impossible to calculate per day. Over 6 months? It's the four weeks of vendace fishing that make up the income. This varies. I haven't broken down exactly what the fishing itself gives, plus there's all the processing afterwards. Then you'd also have to deduct labor costs. Teija calculates roughly to get a value: 1.4 million SEK per year from vendace fishing. Plus some perch and bream. We haven't fished salmon for several seasons — the quota is fished up in 7 days [by those who have good fishing waters near the Torne River), so it's not worth setting the gear, since it takes a week to set and a week to haul.
2	coastal	38	season_maint	NA	1e+05	5e+05	sek_season	I don't remember, it gets lumped together with all other repairs at Guldhaven. We buy 1 boat per season several hundred thousand SEK and a new trawl, 200k SEK, other stuff 100k SEK. Roughly 0.5 million SEK over two years.
2	coastal	39	fuel_trip	NA	NA	NA	sek_day	Don't dare estimate.
2	coastal	40	extra_fuel	NA	NA	NA	sek_day	Marginal, since we have such short distances
2	coastal	41	extra_crew	NA	NA	NA	sek_day	None for fishing itself. We bring in staff for processing (130 people). Finding staff is the limiting factor in fishing, especially when there is as much vendace as there is now
2	coastal	42	extra_cleaning_cost	NA	3	3	minutes_gear	Cleaning traps takes some time, and it gets worse as the water gets warmer. Cleaning 10 traps took 0.5 h. Now we only have 20 traps in the water because of the perch, but when we fish the most, we have 100 traps. Then it means a lot of driving to clean them every three weeks; otherwise, they stay all season, or we clean once. Built ourselves from mink wire. Clean with a pressure washer. Same with bream traps
2	coastal	43	extra_other	NA	NA	NA	not_reported	Things blow away. Doesn't cost much, but takes time to pick everything up when it's scattered across the bay.

id_I	style	id_q	short_description	value	range_low	range_high	unit	range_text
3	coastal	11	minor_damage_cost	NA	1	50000	sek_year	50,000 SEK/year for nets that break, or propellers when blown onto land/rocks
3	coastal	12	major_damage_cost	NA	50000	2e+05	sek	Rare for boats – then we wouldn't be out. But a salmon trap can be destroyed in a summer storm, costing 200,000 SEK
3	coastal	36	fdays	NA	120	150	days	Varies, 120–150 days of net fishing.
3	coastal	37	income	NA	10000	15000	sek_day	Hard to say. Some days 10–15,000 SEK, other days 0 if seals eat everything
3	coastal	38	season_maint	NA	150000	2e+05	sek_season	About 200,000 SEK. 100–150,000 in damages. A lot of time spent on repairs, much voluntary work, patching holes in winter
3	coastal	39	fuel_trip	NA	1500	2500	sek_day	Several thousand SEK. Longest trips 2–3 hours out: 3,000–5,000 SEK/day. Short trips about half. Sometimes just outside the restaurant here
3	coastal	40	extra_fuel	NA	3000	5000	sek_day	See previous
3	coastal	41	extra_crew	NA	0	200	sek_hour	Rare – usually only if a lot of fish. Then about 200 SEK/hour, unless pensioners help voluntarily.
3	coastal	42	extra_cleaning_cost	NA	20	30	hours_evening	20–30 hours. Salmon traps: ~20 h each to clean at season end, sometimes more. Warm July brings more growth. In 2018 it was so warm that when we hauled a trap, with so much fouling, we nearly sank when a waterspout hit
3	coastal	43	extra_other	NA	NA	NA	not_reported	Mostly covered – repairs, gear blown ashore.

id_I	style	id_q	short_description	value	range_low	range_high	unit	range_text
4	subsistence	11	minor_damage_cost	NA	200	2500	sek_unit	Propeller replacement is quite heavy, costs 2,500 SEK. Hull repair we fix ourselves, a couple hundred SEK
4	subsistence	12	major_damage_cost	NA	2500	5000	sek_unit	Engines and boats are insured; we must cover gear ourselves. A few thousand SEK more than the 2,500.
4	subsistence	36	fdays	NA	10	NA	days	Not much lately, maybe 10 days.
4	subsistence	37	income	NA	NA	NA	not_reported	NA
4	subsistence	38	season_maint	NA	NA	5000	sek_season	5k SEK
4	subsistence	39	fuel_trip	NA	5000	20000	sek_season	Significant; 20,000 SEK yearly, much for boats, transport to land, island transport. About 5,000 SEK/year.
4	subsistence	40	extra_fuel	NA	NA	NA	not_reported	NA
4	subsistence	41	extra_crew	NA	NA	NA	not_reported	NA
4	subsistence	42	extra_cleaning_cost	NA	NA	NA	not_reported	When cleaning fish, takes a lot of time.
4	subsistence	43	extra_other	NA	NA	NA	not_reported	I think we've gone through most of it. Water levels: your report mentions it, and many are concerned about low water levels, which indeed happened; but high water is just as problematic – wading out to the boathouse in waders.

id_I	style	id_q	short_description	value	range_low	range_high	unit	text
5	recreational	11	minor_damage_cost	NA	10000	50000	sek_unit	Anything from 10,000 SEK to 1 million SEK – these are expensive toys; hard to say
5	recreational	12	major_damage_cost	NA	50000	1000000	sek_unit	Up to half a million SEK, not uncommon. For new trolling setups, even more. Sportfishing boats cost 50–300,000 SEK, sometimes double
5	recreational	36	fdays	NA	5	100	days	Not in SCB's survey. Average angler maybe 5–10 days, but some 50–100 days. More than 100? Yes, HC!
5	recreational	37	income	NA	NA	NA	not_reported	NA
5	recreational	38	season_maint	NA	100	5000	sek_season	Servicing a boat: at least 5,000 SEK and up. Without a boat: maybe service a reel every couple of years, ~100 SEK
5	recreational	39	fuel_trip	NA	30	50	liter_trip	Varies hugely. Trolling anglers burn a lot. Ordinary perch & pike anglers maybe 30–50 L/trip on average
5	recreational	40	extra_fuel	NA	20	50	liter_trip	Maybe 50 L for a trolling angler. Boats are efficient, so 20–50 L/trip
5	recreational	41	extra_crew	NA	NA	NA	not_reported	NA
5	recreational	42	extra_cleaning_cost	NA	999	999	hours	Some make their own lures/jigs/wobblers – for them, that's half the fishing time, usually done in winter. Affected by algal bloom? No.
5	recreational	43	extra_other	NA	NA	NA	not_reported	Yes – e.g., if you booked a salmon fishing week and they close fishing, you're stuck with costs for a cabin if it can't be rebooked. Usually you can rebook, but I don't know the cost.

id_I	style	id_q	short_description	value	range_low	range_high	unit	text
6	pelagic_trawl	11r	minor_damage_cost	NA	10000	50000	sek_unit	Can be repaired on board; 50,000 to repair a trawl, transport it 10,000 SEK; if the entire trawl were destroyed, our trawl costs 200,000 SEK, there are trawls that cost 800,000 SEK, if you lose it Repair costs 50,000-30,000 trawls The boat is rarely damaged; but a 60 m boat got a hole in the side so they had to replace a plate, which cost 20-30,000 SEK, but we go ashore
6	pelagic_trawl	12r	major_damage_cost	NA	1e+05	5e+05	sek_unit	See 11
6	pelagic_trawl	16r	fdays	NA	140	170	days	In the Baltic Sea, from November to June, about half a year, 7 months, at the moment, but that can change; we fish about 80% of those days, are on board and have the trawl in and are fishing
6	pelagic_trawl	17r	income	NA	25	30	Million_sek	It varies, if we're talking about all boats, we collaborate with another boat, and we've exchanged some fish between us; in the Bothnian Sea, [calculating] 11,000/hour, 25,000 per day in the Bothnian Sea; but off Shetland, we caught 400 tons of mackerel, the entire annual quota, in one hour! That was 8 million/hour
6	pelagic_trawl	18r	season_maint	NA	1	10	% of income	We are doing extensive renovations now, because we are doing a 10-year class when we go through the entire boat, so it could be 10% of the catch, in a normal year it is 1% of the catch (has an income of SEK 25-30 million per year), so 1% of that. If there are two trawls in a season, SEK 300-400. We have an extra trawl with us, as we have two drums, and we have 1-2 trawls in Norrsundet
6	pelagic_trawl	19r	fuel_trip	NA	600	650	liters_hour	if a fishing trip lasts about 1 week; in the Bothnian Sea; 50 m ³ /day * 6 days* = 240 kkr/week 2.5 tons * 4.5*22 hours; runs 22 hours per day 5000L*8h/day; for one week 240 kkr/week (in the Bothnian Sea) [talks about mackerel fishing]
6	pelagic_trawl	10r	extra_fuel	NA	NA	NA	not_reported	transport by truck to Skagen from Norrsundet; do not want to drive the boat that far, it costs money; the Bothnian Sea to the Baltic Sea takes 1.5 days
6	pelagic_trawl	11r	extra_crew	NA	NA	NA	not_reported	Occasionally, if someone is injured or unavailable; there are four of us on the boat; previously, when we had the net, we needed nine people, but that was ten years ago; substitutes receive the same pay
6	pelagic_trawl	12r	extra_cleaning_cost	NA	0	0	hours	No, we don't need to clean the trawls; we lower them into the sea upside down so that they get clean; we both hose them down and dip them; no difference with algae blooms.

6	pelagic_trawl	or_exytra_other	NA	NA	NA	not_reported	Yes, a window can break if you hit a big wave. One boat had a compass on the roof that broke and made a hole right through the roof, so it can cause damage and break things. If water gets into the boat and damages the electronics, it becomes more expensive. 10,000 for a window
---	---------------	-----------------	----	----	----	--------------	---

id_I	style	id_q	short_description	value	range_low	range_high	unit	range_text
7	coastal	11	minor_damage_cost	NA	1000	50000	sek_unit	You know about nets, that's minor damage, but salmon traps cost more to repair because they're special equipment; a few thousand for nets, but salmon traps can cost tens of thousands to repair. Yes, on the boat, it's probably if you drive in bad weather, and there is greater damage to the propeller and gearbox on smaller boats, and on large boats it's also the propeller, then it's tens of thousands of kronor.
7	coastal	12	major_damage_cost	NA	50000	100000	sek_unit	see 11
7	coastal	36	fdays	NA	NA	200	days	around 200 days
7	coastal	37	income	NA	1000	50000	sek_day	It depends on processing, fishing, and smoking; it varies at different times of the year. Spring and early summer are quite intense, then it slows down. You don't get your money back for surströmming until you've sold the cans. Varies from SEK 10,000-50,000/day, depending on the catch and salmon and such; then it is processed. If you get 100 salmon in a trap in one day, that's worth quite a lot just raw, then you smoke it and save it, so you can spread it out over the
7	coastal	38	season_maint	NA	10000	35000	sek_season	Nets require quite a lot of work, and salmon traps in the spring; say SEK 10,000-35,000/year. And in terms of time? About 30 days, depending on whether you encounter breakdowns and such.
7	coastal	39	fuel_trip	NA	5	50	liter_trip	30-50 liters of diesel for herring; if fishing for perch, the costs are not so high because it is quite close, then 4-5 liters of gasoline (because it is a small boat).
7	coastal	40	extra_fuel	NA	50	100	liter_trip	100L of diesel for herring
7	coastal	41	extra_crew	NA	60000	100000	sek_year	has one specifically for herring fishing; he does not fish that many days; costs SEK 60,000-100,000/year
7	coastal	42	extra_cleaning_cost	NA	20	NA	hours	Rinses the salmon traps, takes a few hours in both spring and fall, approx. 20 hours; extra work if there is algae blooms; sometimes there is growth and sometimes there is moss floating around, which is difficult to rinse off, so it has to lie there and rot first; it grows on what is on the beaches and if it is windy, it comes loose and gets stuck in the trap
7	coastal	43	extra_other	NA	NA	NA	not_reported	No, it's usually repairs if there is any damage, etc
