Fishing gear

Coastal fishers

Professional fisherman fishing effort is available at detailed level in in the Fishery Dependent Information (FDI) data from the STECF (STECF 2024). FDI data are filtered on the Swedish Bothnian Sea by filtering on sub region (27.30.D.30) and country code (SWE). Data are further filtered on the vessel length categories < 8m and 8-12m length overall.

Coastal fishers adopt a large variety of fishing technique. We selected the three most important in number of fishing days, which also accounts for more than 85%:

Target species

Coastal fishers

Professional fisherman catches by gear is available at detailed level in in the Fishery Dependent Information (FDI) data from the STECF (STECF 2024). FDI data are filtered on the Swedish Bothnian Sea by filtering on sub region (27.30.D.30) and country code (SWE). Data are further filtered on the vessel length categories < 8m and 8-12m length overall, and on the three combination of fishing gear and target assemblage selected above (hereby referred as metier).

We calculated for each metier the species assemblage making up to the 95% of the average cumulative distribution in the period 2013-2023:

Recreational fishers

STECF. 2024. *The 2024 Annual Economic Report on the EU Fishing Fleet (STECF 24-03 & 24-07)*. Luxembourg: Publications Office of the European Union. <https://publications.jrc.ec.europa.eu/repository/handle/JRC139642>.
